Leadership Council WG and DG Updates
March 19, 2020

WG	Date	Activities
IAWG	Mar 13, 2020	• Provided input to UK Government Digital Services on their GPG44 (Using authenticators to protect an online service). • Provided input to DIACC on the Organization component of the Pan Canadian Trust Framework. • Preparing input to DIACC on the Individual and Privacy components and the Glossary of the Pan Canadian Trust Framework. • Preparing guidance for the Classic Class of Approval Service Assessment Criteria to reduce the risk of phishing attacks. • Developing Service Assessment Criteria for NIST 800-63Rev3 Federation Assurance Level 2 (FAL2) Requirements.
UMAWG	Mar 13, 2020	• Consolidated and revamped its meeting schedule so that we're meeting only on alternate Thursdays. • Discussed a forthcoming contribution from company IDENTOS of an UMA extension that ties in self-sovereign identity technologies and concepts. We'll take a look and consider whether it's something worth standardizing within the group. • Once again discussed how to set up an interop testing environment.

FIREWG	Mar 15, 2020	• Collaborating with the HIAWG and IAWG. Recent work has focused on health care use cases aligned with the activities of the Office of the National Coordinator (ONC) and the Trust Exchange Framework Common Agreement (TEFCA). In particular the FIRE WG has established a set of draft requirements https://wiki.idesg.org/wiki/index.php/High_Assurance_ID_Token#ID_Token and scope for high assurance tokens. We have created a sandbox open to all Kantara WGs, detailing a test suite that will allow developers of code and user experience to assure the compliance of their products to the Health Care Profile of the basic framework.
FIREWG (continued)	Mar 15, 2020	• The FIRE WG representative to the Kantara Initiative Education Foundation (KIEF) also provided an update to the KIEF Board on the intention of the FIRE WG to seek funding to support the pursuit of a grant to: • establish an assurance program for high assurance tokens and applications, • build out the proposed sandbox https://wiki.idesg.org/wiki/index.php/Health_Care_Profile_Sandbox#Context • further build out the IDEF registry so that it can be leveraged by the FIRE WG as well as other Kantara WGs.

ISIWG	Mar 15, 2020	• The Information Sharing Interoperability Work Group (ISI WG) was established to continue and expand on the work previously accomplished in the CISWG which was archived. • The Group is expanding new concepts and information flows towards record-keeping control and management for both the service provider side and the individual side of information sharing between two or more entities. • The Group has organized into several project teams, working on specific solutions to accomplish expanded goals. The WG has taken the current Consent Receipt (CR) specification version 1.1 and will be developing and clarifying fields and field definitions aligning them with other standards, which have emerged since the CIS WG inception. • The project teams are working around specifications for Notice and Consent, the manifestation of consent using standard definitions and labels. Information sharing through two mechanisms, profiles individuals create and use to proffer the information to others called Standard Information Sharing Agreements. Intent Casting, whereby individuals can infer an intent for suppliers to quote a value exchange, often referred to as a deal or trade. These two projects and the output specifications created contribute to the concept of a Personal Data Use Records (PDR) framework.
ISIWG (continued)	Mar 15, 2020	• The PDR Framework publication will be contributed through Kantara's official liaison agreement with ISO SC 17/WG 5 "Identity management, privacy technologies and biometrics" into the new ISO 27560 standards project "Consent Record Information Structure" which will be led by Kantara members. • Continues its outreach and awareness efforts at industry events and conferences. Following its success at Identiverse 2019, it has secured a masterclass session at Identiverse 2020 in June where it will showcase progress in the specification publications and implementations by members.
HIAWG	Mar 17, 2020	• Prepared and approved a draft report entitled Health Care Design Guidelines which is currently undergoing approval by Leadership Council.

UMADevWG	Dec 19, 2018	• The WG has been archived.
IRMWG	Dec 19, 2018	• The WG has been archived.
CISWG	Mar 17, 2020	• The WG has been archived.
CMSWG	**No update since Aug 16, 2018**	• Progress has been slow on the primary deliverables of this WG. The overall plan is to develop a document outline to capture Consent Management common practices, develop an interview protocol and survey, then gather data from as many organizations as possible. Then, the results will be analysed for common practices and areas where standardization could help. We have renewed committments of participant time starting in September, so hope to increase the rate of progress at that time.
eGovWG	**No update since Aug 16, 2018**	• eGov hosted a webinar on August 16, 2018. The Australian DTA has been working on their new Trusted Digital Identity Framework (TDIF). It is a comprehensive set of documents[1] for digital identity in Australia. It covers a range of topics from IDM, Authentication, security privacy, fraud control, etc. DTA are presenting the trust framework aspects on Thursday, August 16 at 14:00 UTC. Webinar recording will be available after the event.
OTTOWG	**No update since Sep 14, 2017**	• Very few meetings held over the summer. Currently working on the JSON-LD vocabulary for SAML. • In the past we had looked at blockchain technologies as a solution for publishing federation data, but we got bogged down on the logistical details. For example, which blockchain, what is the business model, how would we publish claims. Sovrin maybe provides some of the answers to this question. More information about Sovrin can be found at http://sovrin.org. The design of OTTO aligns nicely with Sovrin. We are using JSON-LD as the data format, and the API's defined in OTTO could be used as Sovrin data endpoints. • The DHS ERASMUS pilot, which has been a driver for OTTO, is currently in limbo. The ERASMUS team will be presenting the work to the DHS first responder S&T group for December 7th. That is seen as a necessary gate for Phase II of the project. • Mike will be presenting OTTO at an Internet2 conference right before IIW.

FIWG	No update since Aug 18, 2017	• A project will start soon to create an SP 800-63-3 update to the eGov SAML profile.

DG	Date	Activities
IDPVDG		• The ID Proofing and Verification DG was formed to gather use cases from organizations that perform or require identity assurance. The DG will create a Report containing the use cases, which will be processed into a format suitable for contribution into the ISO SC 27/WG 5 Study Period to collect and document Use Cases for an Identity Assurance Framework.
IDoT DG	Dec 19, 2018	• The DG has been archived.
BSC DG	Dec 19, 2018	• The DG has been archived.
