Enterprise Digital Identity Program

Market Consultation Package

November 2020

Note

Please treat all information shared in the email, this presentation, and during the process as confidential

Package Overview

Digital Identity Vision and Background

Market Consultation & Partnership Models Overview, Ecosystem Participants & Guiding Principles

3 Sample Personas & Benefits

4 Market Consultation Dimensions & Questions

5 Next Steps

Digital Identity Vision & Scope

People and businesses of Ontario can create and use a trusted digital equivalent of their identity (verifiable credentials), to securely access public and private sector services anytime, anywhere, from any device.

DIGITAL VALIDATION and VERIFICATION

Confirming that information about the individual is correct and verifying that an individual's information is tied to a real identity

DIGITAL CREDENTIALS

A reusable, trusted digital representation of an individual's information for use with public and private sector services

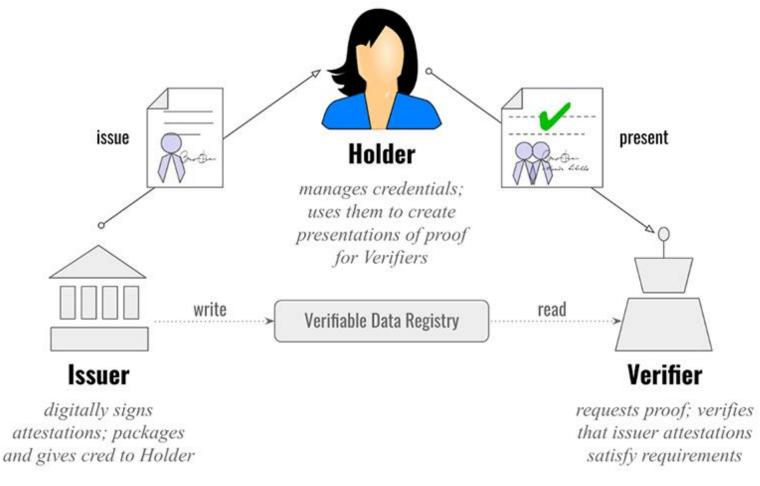

ACCESS MANAGEMENT

Providing the right individual the right access to the right information

Verifiable Credentials (VC) Model for DI

Why the VC Model?

- Open Standards & Interoperable
- More control over data and privacy for users
- Eases burden on Issuer (identity provider)
- Supports zero-knowledge proofs
- Future-proof Ontario's approach
- Scalable
- Aligns with Pan-Canadian Trust Framework

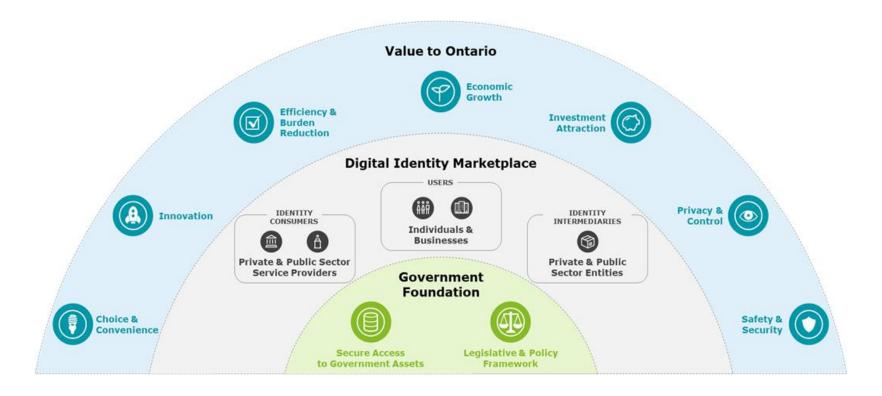

Source: Evernym

Public - Private Sector Collaboration

Partnerships Model Vision

Develop a leading edge digital identity ecosystem enabling Ontario organizations to collaborate and drive economic growth underpinned by a secure and inclusive platform

Value

Ontario has an opportunity to be a leading jurisdiction in Digital Identity.

Based on estimates of the impact of digital identity on GDP in mature economies by McKinsey Global Institute, Ontario stands to gain **\$8B - \$25B in economic value** alone.

Value to Individuals

- Greater convenience, channel choice and availability of services
- Increased control when sharing personal data
- More streamlined online experiences
- Greater **security**

Value to Businesses

- Increased ease in doing business from reduction of regulatory burdens
- Reduced risk of identity fraud
- Cost savings from moving to online channels
- Opportunity to participate in new markets

Value to Government

- Increased efficiency of government service delivery
- Acceleration of digital transformation
- Opportunity to foster private sector growth
- Enhanced public safety through fraud reduction
- Potential for new non-tax revenue streams

What has been done so far

The ODS has been leading work on Digital Identity across government:

- Completed high level business model assessment and developed recommended Public-Private Sector
 Collaboration approach to Digital Identity ecosystems
- Completed user research and prototype testing with 1600+ Ontarians to obtain insights on Digital Identity:
 - 79% are receptive to digital identity
 - 60% see direct personal value of using digital identity
- The Government's Corporate Policy on Electronic Identity, Authentication and Authorization (renamed the Corporate Policy on Identity and Credential Assurance), to reflect and align with the Pan-Canadian Trust
 Framework for Digital Identities
- Established Digital Identity as a **priority for transforming government** services, with strong support across government, including key partner Ministries (MTO, MOH, MGCS and MCCSS)
- Putting government data to use with API-based identity proofing MOH pilot project to launch soon

Market Consultation Objective & Overview

OBJECTIVE

The Province is looking to develop a **Digital Identity (DI) ecosystem for both people and businesses to enable secure access to services anytime, anywhere, and from any device**. To realize the vision, the Province is looking to consult relevant public and private sector stakeholders in order to –

- Identify and assess the potential business model(s)
- Understand key elements to develop a successful partnership structure
- Discuss case studies and key learnings from private sector experience and other jurisdictions

ONTARIO ONWARDS

This initiative is part of the Action Plan, which is a roadmap to improve the overall functioning of government at a rapid pace, based on lessons learned during the ongoing COVID-19 pandemic. The Action Plan outlines how government will:

- Make public sector services and service delivery modern and customer focused;
- Make public sector digital and data- driven and put data at the centre of government decision-making; and
- Increase efficiency, effectiveness and speed of government operations and decisions.

MARKET CONSULTATION OVERVIEW

 Engage like-minded public and private sector players to understand their perspective on digital identity, high value use cases, and where they are on the journey

 Share Ontario point of view and gather perspective from key stakeholders on necessary elements in maturing the digital identity ecosystem

 Devise a go-forward approach leveraging the public-private partnership including ecosystem offering, governance, ownership, technology, and funding models

Market Consultation Dimensions – Illustrative

What kind of benefits can accrue for ecosystem participants? How can revenue be directly generated from digital ID services?

How will the private sector, public sector and citizens interact, and through what means? What roles will each stakeholder play in the ecosystem?

How would the private sector share costs with government? What are the shared risks? Should government provide the lowest level utility infrastructure to ensure security, availability, and independence?

Benefits & Cosystem & Offering

Funding Model & Ownership

Technology & Operations

Technology & Operations

Who should collaborate with government to define what standards and protocols the digital ID ecosystem should leverage, and how?

How should the digital ID system structured (e.g., centralized, federated, decentralized, hybrid model, etc.)? Would different entities use different technologies / platforms in the future state? How would everything come together and sustained including continuous improvement / innovation?

Ecosystem Participants

Identity
Subjects / Holders

- Users of digital identity services
- Could be the subject themselves or may hold a identity on behalf of someone else (e.g., parents on behalf of their kids).
- May include users who may hold / transact on behalf of businesses, if applicable
- Could be referred by different names (e.g., applicant, subscriber, claimant) at different stages.

Policy, Governance & Standards

- Responsible for driving the overall policy related to the identity system.
- Responsible for the governance including: handling accreditation and applicant appeals, ensuring overall outcomes (including financial)
- Could be a public or private sector entity(ies) (e.g. a government agency or body, private sector consortium).

Identity Providers (IdPs) / Issuers

- Issuance, storing and managing users' digital identities.
- Validate / Verify users' identity via different mechanisms and maintain controls.
- Can authenticate any entity connected to a network or a system, including computers and other devices.
- Could be both public (e.g., MOH, MTO, MGCS, MCCSS) and private sector entities (e.g., banks).

Relying Parties (RPs) / Verifiers

- Entities (verifiers) that rely on a user's credentials or authenticators, or a check of a claimant's identity, to identify the user, using an authentication protocol.
- Examples include commercial banks, telecom organizations, securities brokerages, gambling websites, retail vendors, etc.

DI Solution / Network
Providers

- Technology based organizations responsible for developing / maintaining the platform(s) upon which Identity Holders, IdPs, and RPs interact.
- Depending on the model selected, multiple platforms could co-exist, and potentially leverage each other's capabilities.
- Responsible for providing frontend solutions / user interfaces associated with digital identity.

Ontario
Ministries, Boards
& Commissions

Certifying Bodies

Telecom

Federal, Provincial & Municipal Governments

Education

Ecosystem Guiding Principles – Illustrative

Open Standards & Interoperable – Built on open, Verifiable Identity & Credentials – Identity and standards-based protocols, and interoperable with credentials meet appropriate assurance levels international standards defined by business and security requirements **Distributed** – Data is stored and maintained **Robust, Secure and Scalable** – Ecosystem has where it's created, by users and individual state-of-the-art capabilities to prevent against **Ecosystem** identity providers (IdPs) fraud and identity theft, and is easily scalable Guiding **Principles Privacy by Design** – the systems, practices and infrastructure used in the ecosystem are Financially Viable – Doesn't result in undue designed to support privacy, promote user financial burden on taxpayers, and is open to control over their own data and ensure competitive market forces personal and sensitive data is protected. **User Centricity** – Services enabled by the **Inclusive -** Anyone who wants or needs a digital ecosystem are seamless and intuitive, leverage identity is easily able to obtain one – ecosystem innovative technologies and are convenient and meets broad stakeholder needs efficient

Ontarian Personas – People & Businesses

These personas represent a sample overview of some key use cases where individuals or businesses interact with various services. We will investigate how their experience can be improved through the implementation of DI.

Applying for child's health card

Applying for drivers licence

Registering a farm vehicle

Seeking access to essential services

Buying a home and applying for a mortgage

Applying to immigrate to Ontario

Small business applying for licences & permits

A new business sets up all the services

Filing income taxes

Sharing health information (or delegate control) to a POA, caregiver or family member

Applying for benefits (i.e. health, EI, etc.)

Registering a marriage

Applying for an apartment

Registering a loved one's death

Company applying for environmental permissions

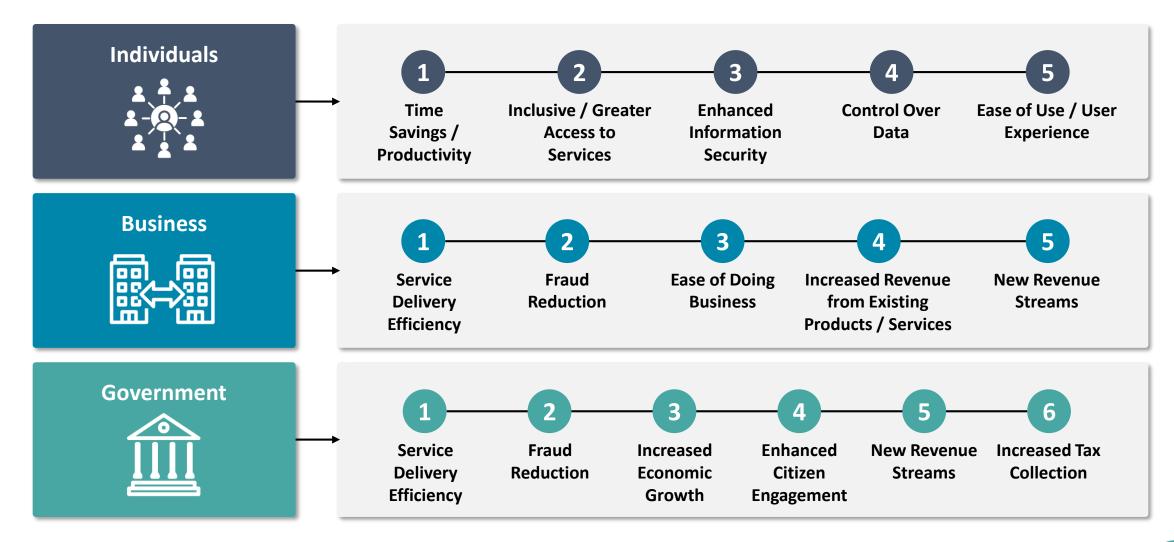

Corporation starts, dissolves or changes

Benefit Streams – Illustrative

Quantitative Benefit

Sub-benefits under each stream – Illustrative (1 of 3)

The map provides a holistic, enterprise view of the core and benefits associated with a digital ID ecosystem – it serves as the foundation for designing and enabling future state capabilities.

		INDIVIDUALS		
Time Savings / Productivity	Inclusive / Greater Access to Services	Enhanced Information Security	Control Over Data	Ease of Use / User Experience
Reduced friction in managing accounts (e.g. no passwords	Streamlined social assistance (e.g. simplified social assistance application)	Reduced likelihood for fraud	Ability to share only necessary information (e.g. driving	Improved / engaging customer experience
required) Streamlined platform / portal(s)		Enhanced trust with consistent controls and guidelines	credentials) Greater data use transparency	Greater user adoption
for services Remote access, through internet	Improved access to all kind of services (excluding social assistance	Limited false rejections (falsely rejecting an individual's ID)	(i.e. more transparent consent when sharing digital identity data)	
(vs. being physically present at a service location)	Improved access to employment opportunities		Opportunity for individuals to monetize data	
Streamlined background verification through the use of digital ID (e.g. during job application)	Reduced discrimination (e.g. when applying for a loan – decision based on data)			
	Easier to vote (resulting in higher voter turnout)			

Sub-benefits under each stream – Illustrative (2 of 3)

The map provides a holistic, enterprise view of the core and benefits associated with a digital ID ecosystem – it serves as the foundation for designing and enabling future state capabilities.

		BUSINESSES		
Service Delivery Efficiency	Fraud Reduction	Ease of Doing Business	Increased Revenue from Existing Products / Services	New Revenue Streams
Unified platform / single portal for verification / services	Greater customer assurance / lower likelihood of identity fraud	Greater client trust (by leveraging secure ID services)	Broader prospect reach through digital platforms	Unlocking new use cases
Improved customer onboarding process	Less error prone, manual processes	Simplified transactions involving multiple entities	New delivery channels for existing products / services	New customer reach (through digital platforms)
Improved customer service process	Reduced payroll fraud	Improved talent matching process	Opportunity to reinvent legacy products / services	New funds to re-invest back into the business
Improved customer off-boarding process	Higher security of digital payments	Improved access to verified	Greater customer loyalty (reduced churn) Reduction in lost prospects	
Quicker time to onboard new employees	Greater vendor trust (e.g. trade finance)	contract workers (through validation of digital ID)		
Lower cost of internal service (reduced manual resource time)		Reduced cycle time to establish a business (e.g. permits, licenses)	(through simplified sales processes)	
Streamlined creditworthiness validation				

Sub-benefits under each stream – Illustrative (3 of 3)

The map provides a holistic, enterprise view of the core and benefits associated with a digital ID ecosystem – it serves as the foundation for designing and enabling future state capabilities.

		GOVER	NMENT		
Service Delivery Efficiency	Fraud Reduction	Increased Economic Growth	Enhanced Citizen Engagement	New Revenue Streams	Increased Tax Collection
Efficient delivery of government services &	Less error prone / manual processes	transact with the private involving multiple en sector (through greater digital reach)	Simplified transactions involving multiple entities	Unlocked use cases	Opportunity for automated tax filing, collection, and
Denefits Quicker time to onboard new employees	More accurate credentialing process (greater assurance)			Opportunity to build greater	Ability to charge private entities for access
Unified platform / single portal for verification /	Reduced payroll leakage	New markets available to the private sector (e.g. ability to transact with citizens outside local geography)	trust in government (should the ecosystem realize the stated benefits)	Additional funds to invest back into government services	employers Improved citizen credential
services Improved resource	Reduced benefit leakage			Services	accuracy (reduced manual follow-up required)
productivity Simplified business registration process	Facilitates institutional compliance with privacy regulations (reduced liability)	Improved worker productivity (through reduced focus on manual activities)			Reduced citizen delinquency Less processing required
Online voting (higher voter turnout / fairer elections)	Reduced political donation fraud (i.e. verifying	Greater opportunities to employ the unemployed			(through automated processes)
Online school enrollment (improved overall enrolment)	donations with digital ID) Reduced voter fraud (fairer elections)	(government could target unemployed Ontarians who hold digital ID, proactively)			
Simpler land ownership / ransfer transaction (reduced manual validation)	Secured sharing of sensitive information (e.g. medical records)	Reduced barriers for entrepreneurs (improved ability to transact with digital ID)			

Potential risks in a digital identity enabled world

Risks

Security & Privacy

- 1 Cybersecurity attacks (e.g., unauthorized access to data, leaks of private and confidential information, system disablement)
- Privacy violations such as misuse, unauthorized use, manipulation of data credentials, non-compliance with organizations such as FINTRAC, etc.

Technology & Operations

- 3 Lack of standardization limits interoperability of ecosystems (e.g., provincial, federal, global) leading to lower overall benefits than expected
- Lack of qualified resources to drive implementation and maturity of ecosystem
- 5 Program implementation and operationalization end up taking much more time and costs than expected
- Technical maturity / digital infrastructure of stakeholder groups (i.e., financial services, telecom) not ready to adopt digital identity at scale
- 7 Unpredictable and costly technological failure and human error

Inclusion & Adoption

- Lack of supporting infrastructure (e.g., access to internet) preventing inclusion of all Ontarians
- 9 Users and institutions are slow / resistant to adopt (e.g., comfort with technology, varied trust levels), due to a lack of education and awareness

Other

- **10** Lengthy policy, regulatory and legislative progress slowing delivery and project timelines
- 11 Inability of the core stakeholder group to agree on the future vision, governance, roadmaps and implementation plans in a timely manner
- 12 Competing priorities (e.g., COVID) lead to lack of funding or resource availability
- 13 Ministries / programs unable to undertake digital transformation of their services procure / build their own solutions to benefit from digital identity

Market Consultation Questions (1 of 2)

Please consider these questions as a guide of the overall breadth and depth of the market consultation process and feel free to share your responses only in areas with deeper experience / perspective; we are flexible about the format of your responses e.g., Word / PowerPoint

Category	Questions
Intro	1. Briefly describe your organization's experience with digital identity in Canada and/or globally. What role do you see your organization playing in a digital identity ecosystem? (i.e. IDP, RP, Identity Network, infrastructure provider, technology provider, other)
	2. How could partnership between the public and private sector be arranged to support the development of the DI ecosystem in Ontario? Government-led? Private sector-led? Consortium? Federated alliance of institutions? As a utility?
	3. What is the minimal role or involvement by government to establish a stable ecosystem environment, while promoting inclusivity, innovation and private sector involvement? What parts (if any) of the DI ecosystem do you feel must be lead, managed, owned by government in the interest of the public good?
	4. What benefits could be realized through public and private sector collaboration? What models of public-private collaboration have you observed in other jurisdictions that Ontario could adopt as a model? Are there specific partnership models that should be avoided and why?
	5. What attributes/features should a digital identities for individuals or businesses include (apart from basic authentication of name, date of birth, registration date, biometric, address). In other words, what other attributes or offerings should be included and why? (i.e. digital signature)
Ecosystem & Offering	6. The long-term vision of the government is to issue verifiable credentials to digital wallets that comply with recognized frameworks and standards such as PCTF and W3C verifiable credentials. Recognizing this and other related standards are still under development, how can government progress towards the verifiable credentials model while delivering on its commitment to launch a digital wallet to the public by the end of 2021?
	7. What is the best approach in this timeframe to ensure we deliver on this commitment? What role can your organization play in helping us deliver?
	8. What should be done to drive active user participation, engagement and adoption of digital identity in Ontario?
	9. What are the highest priority use cases for your organization and/or industry/sector that would benefit from the use of digital identities?
	10. How can unintended consequences of having digital IDs (e.g. social exclusion, tracing, furthering inequality, profiling) be prevented?
	11. How could the digital identity ecosystem be structured to protect data and privacy, build trust and reduce identity fraud? How can privacy concerns associated with the handling of sensitive user data be mitigated?
	12. Once the ecosystem is launched, how could it be matured across public and private sector? What can the government create the conditions for inclusion, competition, innovation, private sector investment and participation in the creation of a financially viable digital identity ecosystem?

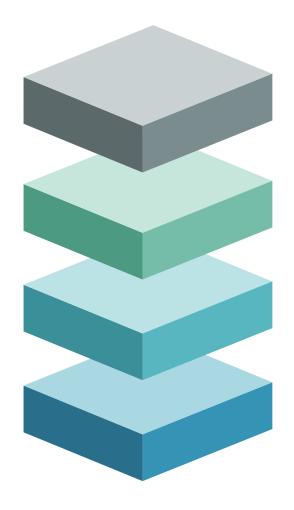

Market Consultation Questions (2 of 2)

Please consider these questions as a guide of the overall breadth and depth of the market consultation process and feel free to share your responses only in areas with deeper experience / perspective; we are flexible about the format of your responses e.g., Word / PowerPoint

Category	Questions
Governance & Authority	13. How should responsibilities for different parts of the Digital ID ecosystem must be delineated? What do you envision the role of Public Sector and Private Sector to be in the overall governance model? Do you see benefit in having the Province provide oversight for the ecosystem?
	14. What legal, policy or regulatory changes should be considered to support effective governance and growth of the digital identity ecosystem?
	15. What could the core guiding principles of the governance framework be?
	16. What could the key operating standards of the ecosystem be?
	17. How would be liability be shared among ecosystem participants?
	18. What are the necessary foundational pieces of the ecosystem that can be stood up / enabled now while standards continue to mature and evolve?
Technology & Operations	19. How would you address difficulties in accessing digital identity services for marginalized Ontarians, who may not have immediate access to a digital device or infrastructure (e.g. high-speed internet)?
	20. What is your perspective on how to mitigate other technology and operations related risks such as resource gaps, implementation delays, cost-overruns, technology changes over time, technology failure, misuse, device/IP/identity spoofing, bots?
Funding Model &	21. How should a digital identity ecosystem be funded? Who should be responsible for capital and operating costs? Any insights from financing a multi-entity ecosystem in the past, that may also have included public and private sector stakeholders? Should any parts of the DI ecosystem be owned and managed by the government, in the public interest/good?
Ownership	22. What are the risks associated with your recommendation? How those could be mitigated?
Benefits & Monetization	23. What are the opportunities for monetization in the ecosystem for various participants to support its overall longer-term sustainability (e.g., business to business, business to government or vice versa, end user fees, data-related services)?
Wrap-Up	24. Have you observed any case studies in other jurisdictions that have made significant progress in implementing a digital ID ecosystem? What has worked well and what are some of the key lessons learned?
	25. We have identified some potential risks associated with a digital identity enabled ecosystem – based on the list provided, are there additional risk categories or key risks that have not been addressed? Please share your perspective on mitigating the risks that haven't been discussed so far.
	26. Is there anything else you would like to share about the approach to developing a digital identity ecosystem?

Next Steps

Complete and share responses to the questions outlined in the package

(please consider the questions included as a guide and feel free to share your responses only in areas with deeper experience / perspective; we are flexible about the format of your responses e.g., Word / PowerPoint)

We will perform an in-depth review of each of the responses and that will inform the go forward strategy and approach for partnership models

We may invite a few organizations for further consultation should there be a benefit in a follow-up discussion based on the responses received

The overall go forward approach might be shared for further review, comments and refinements before finalization, as needed
