

IDENTITY ECOSYSTEM STEERING GROUP CHARTER OF

Terminology Definition Committee (TDC)

Due to the dialog on terminology and definitions which has (being often very passionate and even contentious at times) consumed SCC and many other committees and workgroups within IDESG, it may be necessary to establish a new standing committee for this particular work. The establishment of the TDC will mitigate the notion of any one particular committee/group within IDESG having “privilege” to this most important issue of terminology and definitions, yet with the new committee exclusively dedicated to this work, all committee/workgroups and even non-members may contribute in developing this part of the NSTIC ecosystem. Therefore the following is submitted as a proposal for such an endeavor.

- The TDC may identify and develop and recommend a specialized terminology, definitions and glossary document based on existing glossaries and multiple sectors of public, private, and government, and international input and resources for implementation by IDESG proper as it applies to working infrastructures and working models for the Identity Ecosystem.
- The TDC may leverage participation via a cross section of representation consisting of IDESG proper, in conjunction with Communications and Outreach workgroup (CO), and User Experience (UE) maintaining a flagship roll for new participant enrollment. In addition they may be proposed term limits of participation to maintain the effervescence of TDC perspective.
- Proposed new terminologies and definitions may be submitted by both internal and external providers and stakeholders however are subject to review by TDC. The TDC may establish the gateway(s) for terminology and definition submission.
- TDC may consider existing proposals for TDC working models currently under development in addition to the reviewing of traditional working models used in framing reference documents for general use within an ecosystem e.g. dictionary, thesaurus's, encyclopedias, wiki-pages, etc.
- TDC may administrate a voting for new terminologies and definitions and induction of the same into the IDESG TDC document, based on a criteria established by the TDC.
