P3 Work Group

Privacy & Public Policy

P3 Role In Kantara

P3 Charter,

- Become an active convening **authority** on **identity** in **privacy and public policy** work - including productive engagement with the CPO, policy-makers, regulatory and adoption communities

- Liaise and work **with** other **Kantara groups** to represent the privacy and public policy perspective, and to serve as an ongoing point of reference for privacy/policy-related questions

- Liaise with **projects and organisations outside Kantara** to further the same objectives.

- Lead work to facilitate an identity **Privacy Framework** which complement Kantara's initiatives.

P3 Approach

- **The "Rosetta Stone" of Digital Identity and Privacy**

  - Rosetta stone is known as the key to unlocking the secrets of Egyptian Hieroglyphs

  - For P3 this Rosetta Stone is the key to developing privacy and public policy

Rosetta Stone of Identity

Why is digital privacy hard? (The Stakeholder Model)

Policymakers express frustration that privacy can't just be "built in at the technology layer"

Technologists are often unpleasantly surprised by regulatory/legal requirements which affect the solution

The rights and interests of the data subject can often seem to be very low down the list of priorities...

Implementers can't see why so much time, effort and money still fail to address the actual issues...

Digital identity and privacy raise complex, multi-faceted issues with a multiplicity of stakeholders
